SUMMARY

IT graduate (2026) and full-stack developer focused on payments and integrations. Sole developer of Muster POS, the till system a Canberra cafe trades on every day, with a Linkly-accredited card terminal integration.

EXPERIENCE

Ichi Cafe, *Software Engineer (Part-time)*, Kippax, ACT 2026–Present
musterpos.com | github.com/phuanh20001/Muster-POS | Live demo: dreamy-cafe.vercel.app (staff PIN 1111)

- Built Muster POS (Next.js, PostgreSQL, Prisma) as a self-funded project in 2026; once every sale ran through it, moved into a paid role to maintain it and build the cafe's website and online ordering
- Integrated Stripe, Square and bank EFTPOS behind one payment interface with exact decimal arithmetic; refunds return via the original provider, and a report flags any one-cent mismatch with the provider
- Wrote the low-level messaging for a direct link to the bank's card terminal instead of a ready-made plugin, letting the cafe move in-store payments from Square to its bank's lower card rate; passed Linkly accreditation in September 2026, listed in Linkly's public directory
- Developed with AI coding agents (Claude Code) under guardrails: a written spec, hooks that block them from cutting remote access to the live till, and 700+ tests, ESLint and GitHub Actions gating releases

Onyamarks, *Web Development Intern* Nov 2025–Feb 2026

- Designed front-end layouts in Canva and made small code changes for a web design and SEO agency; supported its SEO work, including Google Business Profile updates

Ichi Cafe, *Waiter*, Kippax, ACT 2023–Present

Kingsley's Chicken, *Customer and Food Service*, Canberra, ACT 2023–Present

- Cover counter, kitchen and some manager shifts in a high-volume fast-food restaurant

EDUCATION

Crown Institute of Higher Education, *Bachelor of Information Technology*, Canberra, ACT 2023–2026

Saigon University, *Bachelor of English Pedagogy*, Vietnam 2018–2023

PROJECTS

AntiqChain, *University capstone* github.com/phuanh20001/AntiqueSystem

- Led a team of 4 as project manager and architect on an antiques marketplace that records each item's ownership history on a blockchain so it cannot be quietly rewritten (Node.js, Express, MongoDB, Solidity)

Identity, *Security engineering practice* github.com/phuanh20001/Identity

- Designed face-recognition sign-in that rejects photos held up to the camera, requires a one-time code, and encrypts biometric data without storing original images (Python, FastAPI, SQLite, Android/Kotlin)

SKILLS

Programming & data: JavaScript, SQL, PostgreSQL
Web: React, Next.js, Node.js, Prisma, Tailwind CSS
Payments & hardware: Stripe, Square, Linkly / PC-EFTPOS card terminals, ESC/POS receipt printers
Testing & DevOps: Node.js test runner, ESLint, GitHub Actions, Git, PowerShell, Cloudflare, Vercel
Practices: AI coding agents (Claude Code) with guardrails, CI/CD, Windows server administration
Languages: Vietnamese (native), English (fluent)
