SUMMARY

I work at a Canberra cafe, and I also built the system it trades on. Muster POS takes card payments at the counter and online, prints the kitchen's dockets, handles bookings and a loyalty card, and keeps selling when the internet drops out. Its card reader integration is Linkly accredited. I wrote it, deployed it on the shop's own computer, and I am the one who keeps it running. Working the floor is why it is any good: I built the till I have to use. Looking for a full-stack or payments role.

EXPERIENCE

Ichi Cafe · waiter, and the cafe's developer 2023 – present · Kippax, ACT
Muster POS, the point-of-sale system the cafe trades on every day. I am its only developer. musterpos.com · github.com/phuanh20001/Muster-POS

- I have worked the counter here since 2023. In 2026 I built the cafe's till, because from the floor I could see what slowed service down. Every sale the cafe makes now runs through software I wrote and still look after on my own.
- The till accepts card payments through three different providers and behaves the same way whichever one is switched on. Each sale remembers who processed it, so a refund always goes back the way the money came in.
- For the newest I connected the till straight to the bank's card reader, writing the low-level messaging myself rather than using a ready-made plugin. It passed Linkly's accreditation in September 2026 and is listed in their public directory.
- Money is worked out exactly, never with the small rounding errors ordinary computer maths introduces, and a report flags any sale that disagrees with the payment provider by even one cent.
- Updates test and install themselves, and roll back if anything fails, because a bad update at opening means the shop cannot take money. Backups are proven by restoring them. When something breaks before opening, it is mine to fix, usually remotely and before staff arrive.
- Staff screens stay on the shop's own network, and online prices are set by the server so a customer cannot change them.
- Also built alongside the till: ordering online for pickup, a loyalty stamp card, table bookings including repeating weekly ones, staff clock-in, stock tracking, and the owner's daily sales and tax reporting.

Kingsley's Chicken · customer and food service 2023 – present · Canberra

- Counter, kitchen and some manager shifts in a high-volume fast-food restaurant: counting stock, calling what to cook next, and keeping the stock numbers on the system current.
- Orders there run on tablets, not paper. Working all three positions is where Muster POS's clock-in, stock tracking and front/kitchen split came from. For the cafe the split became printed dockets, because a cafe is not a chain.

OTHER PROJECTS

AntiqChain · university capstone github.com/phuanh20001/AntiqueSystem

A marketplace for antiques where each item's ownership history is recorded on a blockchain, so it cannot be quietly rewritten later. Includes logins and printable certificates. Node.js, Express, MongoDB and Solidity.

Identity · security engineering practice github.com/phuanh20001/Identity

A sign-in system using face recognition, with checks that reject a photo held up to the camera, one-time codes as a second step, and biometric data kept encrypted so the original images are never stored. Python and FastAPI, with an Android app in Kotlin.

CryptoWallet · Ethereum wallet github.com/phuanh20001/CryptoWallet

Send and receive cryptocurrency and check balances, with a React front end over a Node.js backend.

WETHair · Android weather app github.com/phuanh20001/WETHair

Search any city, save the ones you check often, and see current conditions plus a five-day forecast as charts. Written in Java.

HIGHLIGHTS

- **Linkly accredited** card reader integration, September 2026, listed in Linkly's public directory
- **In daily use** at a trading cafe since 2026
- **Three card providers** behind one interface: Stripe, Square and bank EFTPOS
- **500+ automated checks** run before every update reaches the shop

SEE IT WORKING

- **Try the till** (staff PIN 1111): dreamy-cafe.vercel.app
- **Product site:** musterpos.com
- **Accreditation:** Linkly's accredited POS directory, search "Muster"

SKILLS

Languages & data

JavaScript, Java, Python, SQL, PostgreSQL, MongoDB, SQLite

Web

React, Next.js, Node.js, Express, FastAPI, Prisma, Tailwind CSS

Payments

Stripe, Square, Linkly / PC-EFTPOS card terminals

Other

Android (Java/Kotlin), Solidity, Git, Vercel, Cloudflare, Windows server administration

EDUCATION

Bachelor of Information Technology

Crown Institute of Higher Education, Australia
2023–2026

Bachelor of English Pedagogy

Saigon University, Vietnam
2018–2023

LANGUAGES

Vietnamese: native
English: fluent
