SUMMARY

Full-stack developer focused on payments and integrations. Sole developer of Muster POS, the point-of-sale system a Canberra cafe trades on every day, including a Linkly-accredited card terminal integration.

EXPERIENCE

Ichi Cafe, Waiter and Sole Developer of Muster POS, Kippax, ACT 2023–Present
musterpos.com | github.com/phuanh20001/Muster-POS | Live demo: dreamy-cafe.vercel.app (staff PIN 1111)

- Developed Muster POS in 2026 after seeing from the counter what slowed service down; deployed it on the cafe's own computer and maintain it alone; it handles every sale, about 1,600 orders a week
- Integrated Stripe, Square and bank EFTPOS behind one payment interface with identical till behaviour; each sale records its processor so refunds return through the original provider
- Wrote the low-level messaging for a direct link to the bank's card terminal instead of a ready-made plugin; passed Linkly accreditation in September 2026, listed in Linkly's public directory
- Implemented exact decimal arithmetic for all money calculations to avoid floating-point rounding errors; built a report that flags any sale differing from the payment provider by one cent
- Automated releases with 500+ checks before every update and automatic rollback on failure; proved backups by restoring them, and fix pre-opening faults, usually remotely, before staff arrive
- Kept staff screens on the shop network and set online prices server-side so customers cannot alter them
- Built online pickup ordering, offline mode for internet outages, kitchen docket printing, a loyalty stamp card, one-off and weekly table bookings, staff clock-in, stock tracking, and daily sales and tax reports

Kingsley's Chicken, Customer and Food Service, Canberra, ACT 2023–Present

- Cover counter, kitchen and some manager shifts in a high-volume fast-food restaurant; count stock, call kitchen production and keep system stock levels current
- Drew on the restaurant's tablet ordering to design Muster POS's staff clock-in, stock tracking and front/kitchen split, adapted to printed dockets for the cafe

EDUCATION

Crown Institute of Higher Education, Bachelor of Information Technology, Australia 2023–2026

Saigon University, Bachelor of English Pedagogy, Vietnam 2018–2023

PROJECTS

AntiqChain, University capstone github.com/phuanh20001/AntiqueSystem

- Developed an antiques marketplace that records each item's ownership history on a blockchain so it cannot be quietly rewritten, with logins and printable certificates (Node.js, Express, MongoDB, Solidity)

Identity, Security engineering practice github.com/phuanh20001/Identity

- Designed face-recognition sign-in that rejects photos held up to the camera, requires a one-time code, and encrypts biometric data without storing original images (Python, FastAPI, Android/Kotlin)

CryptoWallet, Ethereum wallet github.com/phuanh20001/CryptoWallet

- Built a wallet to send and receive cryptocurrency and check balances (React, Node.js)

WEThair, Android weather app github.com/phuanh20001/WEThair

- Programmed city search with saved favourites, current conditions and five-day forecast charts (Java)

SKILLS

Programming & data: JavaScript, Java, Python, SQL, PostgreSQL, MongoDB, SQLite

Web: React, Next.js, Node.js, Express, FastAPI, Prisma, Tailwind CSS

Payments: Stripe, Square, Linkly / PC-EFTPOS card terminals

Other: Android (Java/Kotlin), Solidity, Git, Vercel, Cloudflare, Windows server administration

Languages: Vietnamese (native), English (fluent)
