

Ngoc Phu Anh Nguyen

Full-stack developer who builds and ships production systems, with a focus on payments & integrations

ACT, Australia john.phuanhnguyen.dev@gmail.com github.com/phuanh20001

linkedin.com/in/john-phuanhnguyen-dev johnnguyen-portfolio.vercel.app

SUMMARY

Full-stack developer who takes systems all the way to production, not just to a demo. Strongest work is Muster POS, a self-hosted point-of-sale and online-ordering platform that runs the till at a real café and takes card payments through Stripe, Square and a direct bank EFTPOS terminal. Focused on what makes software trustworthy: exact money handling, clear security boundaries, and graceful behaviour when the network drops. Seeking a full-stack or payments-integration role.

SKILLS

Languages	JavaScript, Java, Python, SQL
Frontend	React, Next.js, Tailwind CSS, HTML/CSS
Backend	Node.js, Express, FastAPI, Prisma
Databases	PostgreSQL, MongoDB, SQLite
Payments & Web3	Stripe, Square, Linkly / PC-EFTPOS, ethers.js, Solidity / Hardhat
Mobile & Cloud	Android (Java/Kotlin), Vercel, Cloudflare Tunnel, Git
Practices	AI-assisted development with repo guardrails, exact-money handling, LAN/public security boundaries, tested backups & restore

PROJECTS

Muster POS

ichicafekippax.com · github.com/phuanh20001/Muster-POS

Point-of-sale & online-ordering platform running the counter at Ichi Cafe, Kippax ACT

- Three card processors behind one interface (Stripe, Square, and a direct bank terminal), so checkout, split-tender and refunds behave identically whichever is active; each order records which processor charged it, so a refund always routes back correctly.
- Integrated a CommBank EFTPOS terminal at the protocol level rather than through an SDK: binary TCP/IP framing via Linkly's on-premises client, mid-sale prompts such as signature approval answered from the till, and a durable in-flight record so a crash mid-transaction is recovered on boot. Built and submitted for Linkly accreditation.
- Exact money handling with decimal.js throughout, never floating-point cents; server-side price recomputation on every online order, plus a reconciliation report flagging any order that drifts from the processor by more than a cent.
- Hard LAN/public trust boundary: POS and admin stay on the shop network, only customer routes reach the internet via a Cloudflare Tunnel; offline-tolerant PWA keeps cash sales working when the internet drops.

Stack: Next.js 16, JavaScript, PostgreSQL, Prisma, Tailwind, Stripe, Square, Linkly / PC-EFTPOS

AntiqChain

github.com/phuanh20001/AntiqueSystem

Blockchain-backed platform for authenticating antiques (university capstone)

Node/Express + MongoDB backend with an Ethereum smart-contract layer for tamper-evident provenance records, plus JWT auth and PDF certificate generation.

Stack: Node.js, Express, MongoDB, Solidity / Hardhat, ethers.js

Identity

github.com/phuanh20001/Identity

Biometric authentication system built to practise secure SDLC / DevSecOps

FastAPI backend with role-based access control, TOTP two-factor auth, anti-spoofing liveness checks, and encrypted biometric templates (raw images never stored), with a native Kotlin Android client.

Stack: Python, FastAPI, Kotlin / Android, Cryptography

CryptoWallet

github.com/phuanh20001/CryptoWallet

Ethereum wallet for sending transactions and reading balances

Express backend using ethers.js to talk to the network behind a React front end.

Stack: Node.js, Express, ethers.js, React

WETHair

github.com/phuanh20001/WETHair

Native Android weather app in Java

Search any city, save multiple locations, and view current conditions plus a 5-day forecast with charts. Retrofit against the OpenWeatherMap API, with ViewModel/LiveData architecture and device-location support.

Stack: Java, Android, Retrofit, MPAndroidChart

EDUCATION

Bachelor of Information Technology

Completed 2026

Crown Institute of Higher Education, Australia

Bachelor of English Pedagogy

2018–2023

Saigon University, Vietnam
